## ABSTRACT OF THE DISCLOSURE

A download system 1 in which a transmitting apparatus downloads a program to a receiving apparatus. The receiving apparatus 20 as a requester transmits a program download request to the transmitting apparatus 10, together with receiving apparatus information that indicates the use state of the resources in the receiving apparatus 20. The transmitting apparatus 10 judges whether the requested program can be executed by the receiving apparatus 20, based on the received receiving apparatus information and resource usage information 700 which indicates resources required for each program execution, and is held by the transmitting apparatus 10. The transmitting apparatus 10 downloads the requested program to the receiving apparatus 20 only when it judges positively.
